

- **INDPRO THERMO**
- **INDPRO FLUSHING OIL**

INDPRO THERMO is a special quality ISO VG 32 mineral oil based heat transfer fluid designed to provide outstanding thermal and chemical oxidation stability. It has excellent specific heat and thermal conductivity properties at a wide range of temperatures providing rapid and efficient heating in a system without build up of deposits or thermal cracking. It is recommended for closed, cold-oil sealed, heat transfer systems where the maximum temperature does not exceed 285 oC and the minimum shutdown temperature should not be less than –6 oC.

INDPRO FLUSHING OIL is a light ISO VG 32 mineral oil suitable for flushing lubricating systems, both automotive and industrial, either for commissioning purposes or to purge contaminants or lubricants that need replacing. Its low viscosity means that it will readily mix with most oils plus a small amount remaining in a system should not generally present any concern.
